

ReForm / Installation of Addon

WORK IN PROGRESS | Development build 5.3.0. Features and interface may change. Reviewed 8 October 2026.

1 / Match the installer to your system

Use the complete Windows x64 ReForm download. Confirm that it includes your Revit year and a compatible Blender runtime. These 5.3 extension packages require Blender 5.3.

2 / Extract the whole download

Keep extensions, template, ReForm.exe and the revit folder together. An extension ZIP alone is not the complete ReForm application installer.

3 / Run the installer

Extract the complete Windows ReForm download, close Revit and run Install.cmd. Keep extensions, template, launcher and revit folders together. It installs under %LOCALAPPDATA%\ReForm with a separate Blender profile. Use the Blender runtime supplied with, or specified for, your download; the 5.3 extension build requires Blender 5.3.

After installation, these are the main stages of the product workflow.

Verify the installation

4 / Complete the product-specific setup

Keep a copy of the original download. Start the installed application and review the loaded product version before opening working files.

5 / Check the interface

Launch ReForm from its shortcut. Start your supported Revit version and check for Edit in ReForm and Reload from ReForm. In ReForm, confirm the import tools and modelling commands are available. Review any load prompt against the installation path.

6 / Save a practice file

Use a new scene or a copy of a project for the first tutorial. Save to a writable folder, then continue with the Quick Start Tutorial linked on the product page.

If the product does not appear

Recheck the application version, correct ZIP and enabled state. Restart after installing binary dependencies. Read the first error reported by the application before reinstalling; it often identifies a missing companion package or incompatible build.

Compatibility and scope

Work in progress. The installer must contain a build for your Revit year; the source targets 2024-2027, but download contents determine availability. Exact-solid export from Revit starts with 2025. Revit LT cannot load the companion add-in. The return workflow rebuilds replacements as DirectShapes.
