

XForm / Installation of Addon

WORK IN PROGRESS | Development build 5.3.0. Features and interface may change. Reviewed 8 October 2026.

1 / Match Blender and the package

Use Blender 5.3 for the packages covered here. A 5.3 extension may be rejected by Blender 5.2. Use the package for your platform where platform builds are supplied.

2 / Gather the complete bundle

XForm, Assy, Profiles, Para and Shell. If delivered inside an outer bundle archive, extract it to expose the individual extension ZIP files. Keep those ZIPs compressed.

3 / Install the extensions

In Blender choose Edit > Preferences > Get Extensions, open the menu and choose Install from Disk. Select each supplied extension ZIP. Enable the installed extensions in Preferences > Add-ons. Install/enable companion extensions before starting the main product workflow.

After installation, these are the main stages of the product workflow.

Verify the installation

4 / Complete the product-specific setup

Install all five extension packages supplied in the XForm bundle. Assy is a separate extension in the current bundle. Profiles and Para are also separate; do not look for an embedded Profiles tab inside XForm.

5 / Check the interface

In a 3D View, press N and open XForm. Confirm the Dimensions and Bevel tools are present. Check Assy, Profiles and Para in their separate sidebars. Alt+X should open modelling aids while the pointer is over the viewport.

6 / Save a practice file

Use a new scene or a copy of a project for the first tutorial. Save to a writable folder, then continue with the Quick Start Tutorial linked on the product page.

If the product does not appear

Recheck the application version, correct ZIP and enabled state. Restart after installing binary dependencies. Read the first error reported by the application before reinstalling; it often identifies a missing companion package or incompatible build.

Compatibility and scope

Work in progress. Tool layout and bundle contents may evolve. XForm edits meshes; exact B-rep solid editing and STEP solid exchange belong to ZForm. Assy, Profiles and Para have their own sidebars.
